

Shipping supplies: use of **ANTI-SLIP PALLET PAPER** will result in
« COST SAVINGS & GREEN WAY »

Contact : Yves Beaudin, Sales & Marketing

Anti-slip "tier" sheets **STABULON™** maximize stability and protection of goods palletized on conveyors or handle on lift and shipping by trucks. Coefficient of friction can go up to a **60°** angle.

STABULON™ Contributes to a sustainable environment.

- 100 % recyclable
- Made of 98 % recycled materials
- Caliper : 8 to 14 point (3 to 10 times thinner than any standard board)
- Out-perform standard board and improve STABILITY on skids:
 - Reduction of other packaging materials
 - Helps column-stacking
 - More layers of products per skid

Case study: Increasing products per skid & cost reduction

Opportunity

A pet food manufacturer was looking for cost reduction opportunities. The packaging is plastic bags weighing 16 lbs. Bags have the highest COF to be obtained for the outer ply (spec is 0.5 min). The manufacturer was only able to get 5 layers per pallet and can not double stack skids. They wanted to palletize 11 tiers per skid.

Solution

CGP EXPAL Inc. supplied the anti-slip sheets **STABULON™ 110**. As very flexible sheets that take on the exact shape of the bags, **STABULON™ 110** sheets increased interlocking between bags and prevented them from sliding.

Results

The pet food manufacturer not only achieved his goal of stacking 11 layers on a skid, he also was able to make savings on stretch wrap.

COST SAVINGS & BENEFITS

WHERE	WHY	HOW
PRODUCTION / OPERATIONS	Higher productivity	Faster conveyor lines. STABULON™ can be placed by hand or with any palletization system. No investment and maintenance to use STABULON™.
PACKAGING	Reduced over-all packaging costs	STABULON™ prevent lower boxes from crushing. Decreased composition of corrugated cases.
	Reduce use of stretch film up to 70 %	Control of stretch wrap budget.
	Allows column stacking vs interlocking	Best space-efficient palletization pattern.
WAREHOUSING	Co-packing and picking	STABULON™ does not stick to items.
	Best storage space efficiency	Less floor surface needed with higher stacked pallets. Allows skids break down for cross-docking. Pallets can be used in fully automated storage.
TRANSPORT	Reduces transportation costs Protection of loaded skids	Adding layers of products on skids with maximized stability. Optimised volume loading of trucks and containers. Less time to load and unload trucks and containers.
QUALITY	Managing product damages	Eliminates product damages.
SAFETY	70% of accidents in the transportation industry occur during loading and unloading operations	Elimination of personal injuries due to products falling when fork lifting, loading and unloading racks & trucks.
ENVIRONMENT	Caring for the future	100 % recyclable, reusable and repulpable

CGP EXPAL Inc

Manufacturer specialized in anti-slip shipping supplies in the form of layer sheets and pads, slipsheets, labels, tape, tubes and floor mats for containers & trucks. All the products are recyclable, reusable and repulpable and helps to stabilize goods on pallets during handling and shipping. Works on any kind of pallets, stacking types and packages (box, bag, tray...).
