

PALFRESH

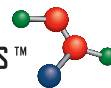

CRACK THE CODE OF LOW-FAT DIETS

PALFRESH™ is a breakthrough, patent-pending palatability enhancer that combines Kemin's antioxidant expertise and superior palatability technology to deliver longer shelf-life, maintain palatability and reduce the risks associated with low-fat diets – ***all in one product.*** PALFRESH products are designed to be:

- ▷ a critical component of an effective natural stabilization program, a prerequisite for good palatability, for challenging diet
- ✕ a palatant that extends palatability throughout shelf-life

INSPIRED MOLECULAR SOLUTIONS™

CRACK THE CODE OF LOW-FAT DIETS

Good stability of a petfood diet is a prerequisite for optimal palatability.

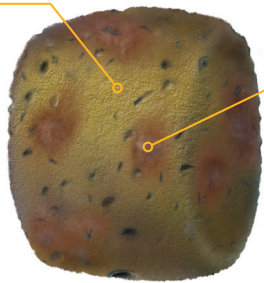

Natural stability programs designed for petfood diets with meat meals, grains and fat levels above 10%, work well for standard diets.

However, low fat diets may not be stabilized as effectively as standard diets with the same approach.

Less topical fat = less antioxidant.

UNDER-DOSAGE

Topical fat contributes much of the antioxidant to a petfood diet, so low-fat diets may be under-dosed.

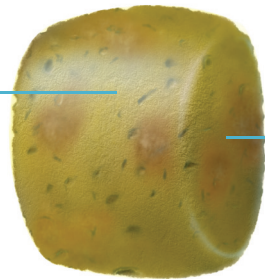

UNEVEN COATING

Uneven coating can also occur when topical fat levels are low and that leaves low-fat diets more susceptible to rapid oxidation.

PALFRESH™ PROVIDES...

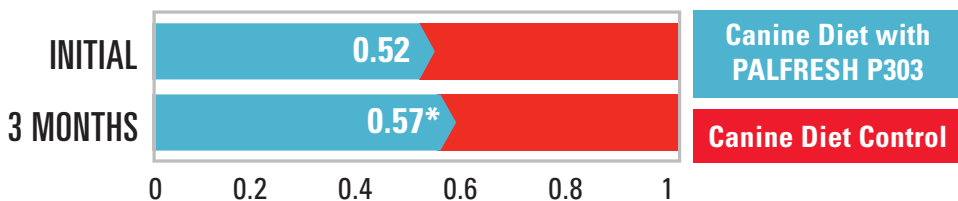

EXTENDED PALATABILITY!

TARGET DOSAGE!

EVEN COATING!

AVERAGE INTAKE RATIO (PARITY = 0.5, * DENOTES ≤ 0.05)

Crack the code of your natural low-fat diets today by using PALFRESH, the only product to improve stability and reinforce palatability performance.

PALFRESH provides a breakthrough in low-fat diet stability and a breakthrough in palatability performance all in one product.
