

PAPPAS 225 DPE & TPE

The *Pappas 225* is the premium for emulsification available in the market today. The 225 DPE & 225 TPE both feature the “KE Floating Knife System” with unmatched cutting design, and sold exclusively by Pappas Inc. The 225 DPE features dual plate cutting while the 225 TPE features triple plate design. Both offer a variety of configurations custom made to fit your application; from pump feed, to standard hopper, to bulk hopper design, and is available in 100 to 250 horsepower. The 225 can produce in excess of 1000 pounds per minute, and is sized to fit your application. It also provides you with the ultimate in product reduction and protein extraction that you have come to expect from your emulsification system. Available in Direct Drive, Belt Drive, or in the totally new Direct/Belt Drive, the *Pappas 225* can help you achieve the results you have been looking for, and best of all, it's **MADE IN THE USA!**

Features:

- Open hopper or pump flange infeed and a 4” sanitary discharge.
- Cutting set options include 3, 6, or 8 wing knife mounts, stainless steel lug rings with 5, 10, 15, or 24 lugs, and 2, 3, 4, or 6 wing Throw-Out-Rotor.
- Simple one step “jigging” process for assembly of cutting set.
- Torque setting easily adjustable before or during operation.
- All stainless steel construction.
- Available with completely enclosed vacuum system.
- Optional oil lubrication system for low maintenance and extended bearing life

The Cutting Chamber:

Each component of the cutting system is precision ground and hardened to meet the most demanding of work conditions. For extremely demanding applications, the knife mounts and lug rings are manufactured from special materials to withstand the wear and tear associated with those conditions, such as with bone-in products. With the "KE System", the 225 DPE will achieve the ultimate in protein extraction and particle reduction.

Knife mounts are available in 3, 6, and 8 arm styles. All knives feature independent floating of the knife mount, which delivers 360° knife-to-plate contact. The result is more efficient cutting of the product with cooler product temperatures.

The function of the lug ring is to restrict product swirl in the cutting chamber while at the same time, provide additional cutting action in the chamber. Lug rings are available in various lug configurations and are designed to fit your needs, from stainless steel to tool steel materials.

Bulk Hopper Application

225 DPE Belt Drive

Direct/Belt Drive

Whether processing for human consumption or animal consumption, we have the machine necessary to insure the job is done right the first time and at the level of production you wish to achieve. Each machine is designed with your satisfaction in mind and will be manufactured to fit your process. Give the Pappas 225 a try and we'll guarantee your satisfaction!

Customer Satisfaction

Pappas Inc has been manufacturing, reconditioning, and servicing machines for more than 40 years. Our success is a product of our commitment to excellence in design, manufacturing, and understanding of customer satisfaction. Our post-sales support includes installations and on-site commissioning of the equipment to insure your satisfaction before production begins. Technical support is available 24 hours a day to further promote your satisfaction.
