The Hollison Difference - ENHANCING THE SAFETY OF FOOD

Our slogan is our commitment and our drive. Hollison's technology is not only enhancing the safety of food, but it is creating a new culture for food safety and technology through cutting-edge solutions.

The Hollison Difference is focused on the detection of and protection from pathogens that may be found in food production, ingredient sources and environments.

Hollison's patented True Sampler™ and DuraSampler™ have mastered the accuracy and efficiency of continuous food sampling to help ensure no pathogens are present.

Hollison also manufactures and distributes natural and safe probiotic blends – one that can be applied to food, and PROTECT™, Hollison's newest probiotics solution, designed for office, locker room, food preparation and other industrial spaces to protect against pathogens.

With Patented Machines

Hollison began with its patented True Sampler™ and DuraSampler™ machines, which are transforming the safety and efficiency of product testing. Our cutting-edge technology is leading the food safety industry in protecting employees, consumers and facilities across the globe.

The True Sampler™ pulls a continuous sample without human intervention, which significantly increases the accuracy of testing from the standard "grab" sample. The DuraSampler™ takes the process a step further by focusing on the particulates around the finished product to provide a lab-ready liquid sample.

Hollison's talented Engineering Team designs and manufactures the Samplers, and schedules regular service and maintenance calls for our customers. When something is needed, Hollison goes to great lengths to provide the exact solution needed. No job is too difficult.

DuraSampler™

With Probiotics

Probiotics are more than just the good stuff found in yogurt or supplements for digestive health. Probiotics also combat the unwanted stuff – *Salmonella*, *E. coli*, *Listeria monocytogenes* – that may be found in food production, locker rooms, industrial facilities, and other spaces where bacteria thrive.

PROTECT™, Hollison's probiotic application system, takes protection to a new level and can be applied wherever unwanted bacteria have the potential to gather and grow. PROTECT™ delivers another layer of protection and confidence.

Hollison's proprietary probiotic blends are formulated specifically and uniquely according to the customer's need. Hollison's experienced team will help you determine how and where to use probiotics.

When used together, Hollison's probiotics and samplers are the best solution for ensuring your product is safe, ready for consumption and meeting label claims – allowing CEOs and company leaders to sleep better at night.

That's the Hollison Difference.
