PACK SMART...

PETVENT

STOP CONTAMINATION, START EFFICIENCY

PetVent (patent pending) is an innovative adhesive patch that is applied to the inside of your medium and large pet food packages.

PetVent is a small, specially designed vent that uses minimal materials and lets air escape from a filled and sealed package.

Using high-quality filtering material, it prevents insect infestation and foreign particles from contaminating the contents of the bag - meaning no moths and no returns!

12 Tupper Blvd., Amherst,
Nova Scotia Canada B4H 4S7

emmersonpackaging.com

STACK FOOD, NOT AIR.

At Emmerson Packaging, we believe that air is for breathing—not for packing. That’s why we’ve developed an elegant alternative solution to the typical air evacuation methods in the market.

With our quality packaging and venting technology, you no longer have to worry about oil and grease leakage. Hidden on the inside of your packaging, the adhesive patch is labeled with a message so customers know it’s meant to be there, and because it’s on the inside it won’t compete with your graphics.
