CALCIUM STEARATE

FEED GRADE

THE CALCIUM STEARATE FEED GRADE FROM CORPORACION SIERRA MADRE

Is a white, waxy powder formed from the reaction of a Calcium Salt (food grade) and a vegetal fatty acid (Halal and Kosher Certified). Calcium Stearate Feed Grade from CSM is considered to be a non-toxic product when is used in accordance with Good Manufacturing Practices (FASEB 1975, ACT 1982). Research on Calcium Stearate has found no evidence regarding contaminants, breakdown products, or any toxic interactions in the environment.

Calcium Stearate is a salt that prevents moisture in the animal food. Calcium Stearate is a highly resistant to water and has water-repellent properties which results in a product with good shelf life and very good stability at high temperatures. Calcium Stearate Feed Grade from Corporacion Siera Madre complies with the FDA regulation 21 CFR 573.280. CSM has a HACCP Plan and good manufacturing process in site.

CSM calcium stearate has a good contact area to cover the final product which helps increase the shelf life of food for animals due to the water repellent, anti-caking properties. It acts as an agent to help avoid hardness of the final food for animals.

The mineral and fatty acid profile of Calcium Stearate serve as nutritive properties when used as a food. Besides preserving feed or minerals premixes, because it has a fatty acid plus a calcium element, it will work as an excellent additive to increase the fat in the milk as well as the calcium content.
