Packaging Innovation

Packaging not only has to protect its contents, its success rests on its ability to distinguish the visual and physical properties that make it stand out from the crowd and connect with consumers as part of the brand experience.

Packaging must also add value throughout the supply chain, making distribution to and handling by the consumer as efficient as possible while minimizing its environmental impact. Therefore, we are constantly seeking for packaging innovation with the essence of KrcPack packaging intelligence.

To realize that approach, KrcPack leverages closer relationships with its customers, ensuring that KrcPack, as their packaging partner, fully understands the dynamics that are shaping its customer's markets to deliver the innovative packaging that they need and want.

Flexible

Printing and Lamination

We offer both Flexographic and Rotogravure printing and can print up to 1450mm wide and a repeat length of 1150mm in up to 10 colours process. Digital control of our printing presses ensures consistent colour management. We can print utilising high definition Flexo plates incorporating flat top dot technology which greatly increases visual impact. Our Rotogravure presses are capable of printing up to 9 colours, 1250mm wide and up to 900mm repeat length which enables reproduction of the most complex designs. Solvent-free and water-based lamination are available, up to a four layer structure (Quadraplex) in the following structures:

Keep the originality

PET
Metallised PET
BOPP
Metallised BOPP
CPP
OPA
PE
EVOH
ALU Foil

Flexographic

High quality process Flexographic printing, utilising the latest design of gearless presses in up to 10 colours, is available. We can also print using the latest technology High Definition Flexo plates. This new development elevates the quality of our Flexographic printing closer to the standards achievable with Rotogravure. Please go to the 'Design' section for more information about High Definition Printing.

Rotogravure

Rotogravure printing in up to 10 colours gives superlative results. Modern computer controlled laser engraving has resulted in origination costs that are much closer to those of digital Flexo. Various inline options are available such as printing on both sides of the film or cold seal application.

Pouches (Doypack)

Pouches (Shape Cut)

Pouches are available in different formats from a three-side seal to a stand up pouch, with or without re-closures. Made from laminated co-extruded films, they offer good strength and visual impact.

This pack format is suitable for 50g to 10kg weights with many different finishes from paper to metallised foils. Easy-open laser score provides greater flexibility to designs and performance as well as optional re-closure systems, top sliders, press to close (PTC), Euroslots and handles.

Business is valuable

Spout Pouches (Shape Cut)

Spout Pouches are a cost-effective alternative to rigid packaging and are available with many different types of attachments of spout, in a range of sizes and colours. They are made from laminated co-extruded films, offering good strength and visual impact. This pack format is suitable for 50g to 10kg weights, for liquids and powders with tamper-evident screw caps for greater flexibility to designs and product performance. They also offer ease of dispense / pour product out of the pack and easy carry handles.

We add value to the world

Flat Base Pouches (Block Bottom)

Flat Base Pouches are side-gusseted pouches with five main panels for product branding. Made from laminated co-extruded films, they have good strength and visual impact. Due to having a true flat bottom, they offer good product stability and presentation on shelf. This pack format is suitable for 150g to 10kg weights, with options of multiple webs providing greater flexibility to designs and performance as well as optional re-closure systems such as top sliders, press to close (PTC) zippers and easy carry handles.

Quad Seal

Quad Seal laminated bags are side-gusseted bags with four main panels for product branding. They are made from laminated, co-extruded films, providing good strength and visual impact as well as good palletisation due to welded corners.

This pack format is suitable for 400g to 20kg weights, with options to add a folded bottom for additional branding and good product presentation when packs are laid down in store. Optional re-closure systems, sliders, press to close (PTC) zippers as well as easy carry handles are also available.
