

# DESIGN SERVICES

At Weitz, we have a different perspective on engineering project development as compared to traditional architectural or engineering firms. As a design-build firm, we are knowledgeable in all aspects of the project from conception to start-up and understand the total cost to get there – not just one piece of it. We put forth an effort to understand what makes our owner/client successful and what makes practical sense based on their budget. Our concepts and designs gravitate toward those goals. Having this awareness enables us to design state-of-the-art facilities. We have the talent in our organization to create the leading edge of technology. We are the industry’s gold standard in design, construction and safety.

Weitz’s engineering staff is up-to-date with construction costs. Working side-by-side with our own estimators and construction personnel, our engineering staff designs to a budget. With regular input from Weitz’s construction personnel and construction safety professionals, our designs begin and end with construction and plant operation safety in mind.

Our method is simple. Weitz is a single source, multi-discipline integrated design engineering and construction operations group serving the agricultural, seed, feed, grain, food and beverage, manufacturing and process, and heavy industrial markets.

## INTEGRATED DESIGN SOLUTIONS

- Conceptual Design
- Lean Solutions
- Master Planning
- Facility Layout and Design
- Slipform Design
- Material Handling Design
- Civil and Structural Design
- Mechanical & Process Design
- Equip. Specification and Procurement
- Site Selection and Evaluation
- Modular Designs
- Specification Development
- Engineering Studies
- Insurance Investigations
