

# Surdry Technologies

RETORTS YOU CAN TRUST

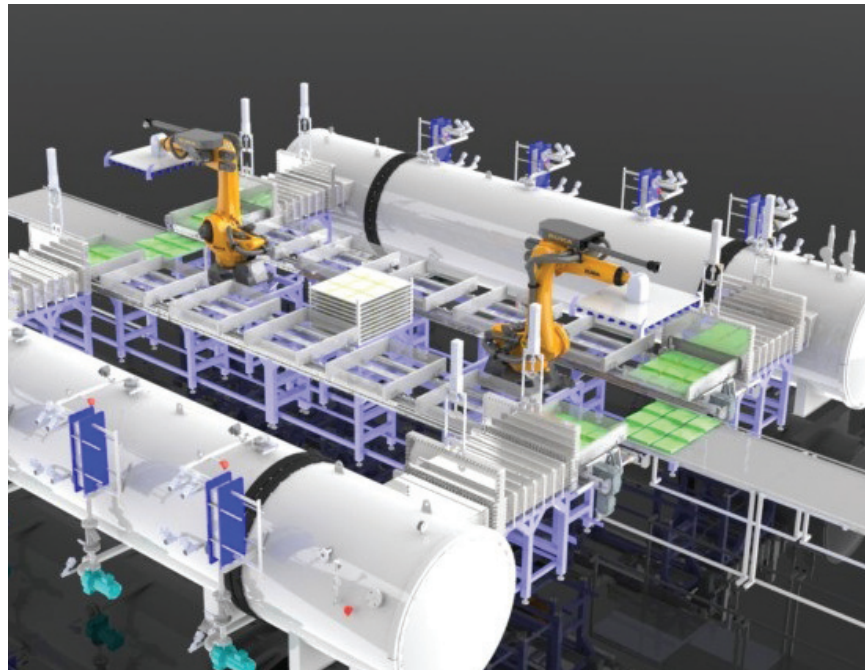

## Pilot Retorts

Designed for food production companies, packaging manufacturers or R&D centers, where user-friendly and flexible equipment (single SWS or multiprocessing) helps develop new product recipes, test new packaging or migrate recipes to different thermal processing equipment.

## New Continuous Sterilizer ECB Series

- Designed and patented by Surdry, it is ideal for medium to high production capacity production and the most flexible and cost-effective solution in the market.
- Divided into multiple temperature sections. Heating and cooling sections are separated by a patented thermal isolation method.
- Significantly reduces steam and water consumption.

## Steam & Water Spray (SWS) Batch Retorts

- Sterilizes products in any container type and is especially beneficial for flexible packages.
- Spray water bar system on top and sides of the retort chamber ensures uniform temperature distribution throughout the load.
- Direct steam injection heating provides secure process repeatability and minimal maintenance.
