RETORTS YOU CAN TRUST
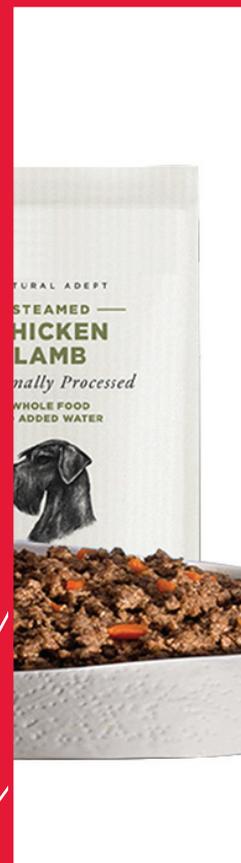

Surdry SteriNet21
New Surdry Control Platform

SteriNet21 is Surdry's new hardware and software platform that controls and records retort thermal processes. Surdry control engineers worked closely with FDA Thermal Process Authorities to ensure compliance with FDA 21 CFR Part 11 (Electronic Records and Electronic Signatures). With SteriNet21, paper records are replaced with acceptable digital documents to register LACF retort processes with the FDA.
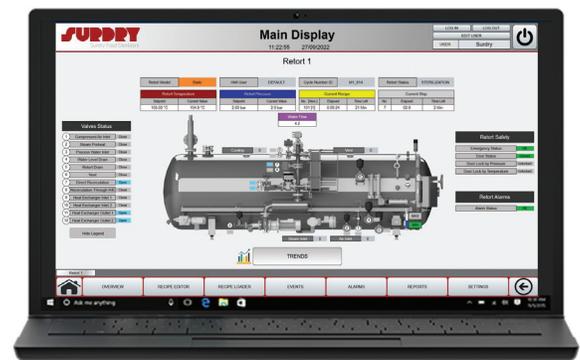

Main features

- FDA compliant
- Individually customizable per user
- Simple and error proof recipe editing and data storage
- User action traceability

- Real-time process and live data trend viewing
- Alarm and event history monitoring
- Critical verification of operations setup
- Ball formula and table lookup method
- FDA compliant batch reports
