Glen Rose Meat Company is a full line, Beef, Pork, Poultry processor and supplier in the Southern California, Los Angeles, area. Glen Rose has been providing the highest quality products and servicing the Greater Los Angeles market and surrounding communities since 1985.

Our processing facility had been using "corrugated" combo bins to manage our processed items. This was creating a dual issue. First was the cost component and second was the waste generated from these "disposable" combo bins.

Similarly, we had been using steel buggies in our processing area as well. This is prevalent in the industry and was always susceptible to issues and concerns. They were heavy, cumbersome, and needed constant maintenance. The weight of the filled buggy created a less than desirable aspect for our employees when they were required to move these containers. We needed alternatives and help.

During my search for alternatives I had looked at foldable combos and a more undesirable products than what I eventually found, but didn't know any better. That is until I met, Saeplasts, Ian Weiss. Ian came to our facility on a cold call, that was the timeliest and well needed call I believe I could ever get. Within 10 minutes Ian had shown me the line of products and basically piqued my interest so much, and was exactly what I had been searching for, I was ready to order on the spot.

Saeplast was able to point out some distinct advantages to the Saeplast PE container and PE buggy solutions that could alleviate risk to our operation and to eliminate employee safety risk.

The Saeplast PE Containers offer us a solution – a FDA approved container that can be used repeatedly for direct food contact. We can now eliminate any need for waste going to landfill. We have seen the per day cost to reuse Saeplast PE containers is far lower than corrugated could ever be.

The Saeplast PE buggies are lightweight in nature and feature a raised food approved handle that allows our employees to be more ergonomic. Our employees are very happy with them. No more sore backs from being bent over pushing a heavy load throughout the plant.

These Saeplast PE containers and buggies have performed as Ian Weiss told us they would. Saeplast helped us solve challenges around food safety, reusability, reducing waste, and improving the health and safety of our employees. Glen Rose Meat Company looks forward to continuing to work with Saeplast to be able to offer our customer base the safest products, which they deserve.

Saeplast and Ian Weiss, Thank you very much!

Martin Lizarraga
